

# WENDLAND

R O O F S O L U T I O N S

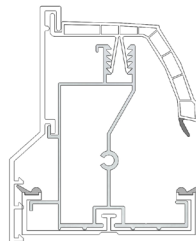

## Features & Benefits

### Chambered Top Caps

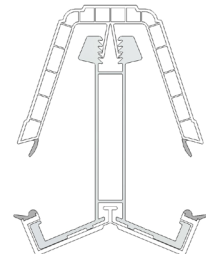

- Increased thermal efficiency up to 4°C warmer than with similar systems. 18% better thermal efficiency ('U' value) than with the current top cappings and up to 40% better than competitors.
- Barbs on PVC top cap are retained inside aluminium structure - enhanced security.
- 10mm hidden flipper gasket - adjusts to tolerance in the glazing material.
- Bowing and twisting is resisted, reducing call backs and eliminating the need for the more expensive thermally inefficient aluminium top cappings.
- High strength twin wall chambered top cap offers the ability to be folied - tried and tested over 10 years.
- The thermally better PVC reduces the risk of condensation - patented technology
